

Walshs Glass offers you a range of shower screen alternatives to complement the bathroom you are creating to enjoy every day.

Select from Walshs Glass Fully Frameless, Semi Frameless, Fully Framed and Sliding options. The smooth contoured profiles of the shower screen range means minimal soap and residue can accumulate, making cleaning and maintenance simple.

Frameless shower screens

The Walshs Frameless Shower Screen offers a minimal visual impact on your bathroom. The look is elegant and timeless, with enclosures manufactured from 8mm or 10mm toughened glass offering total piece of mind, and is supported by a range of sophisticated and tasteful fittings. With little more than glass to be cared for, a frameless shower screen makes your bathroom easier to keep looking fresh and clean.

Semi-frameless shower screens

The Walshs Semi-Framed Shower Screen features a rounded convex profile that is neat and tidy to the eye. With a smooth action door utilising a stainless steel pivot pin you can be sure of having a 'positive close'. Whisper quiet, the pivoting door has been designed with a built in lowering effect which reduces the gap between door and sill on closure meaning minimal water splashing outside the shower enclosure.

Semi-frameless shower screens

The smooth contoured profiles of Semi-frameless Shower Screens means minimal soap and residue can accumulate, making cleaning and maintenance so much easier. With a 180° door swing possible, as well as an inward or outward opening choice, you have maximum use of your bathroom. Designed specifically for use with toughened glass to comply with Australian Standards you are assured of a safe environment for your family.

Not every bathroom is standard and many have unique features that need to be considered. The Walshs Semi-Framed Shower Screen can be adapted and designed for fitting into most situations. Ask us for advice on creating a design that suits your needs.

To enhance the look of your bathroom, the Walshs Semi-Framed Shower screen offers a range of handles and pivots in Almond Ivory, White, Bright Silver or Matt Natural.

Fully-framed shower screens

The Walshs Fully-Framed Fixed Panel Shower Screen is the perfect solution for most bathrooms. The contoured fully enclosed twin-tiered sill is specially designed to direct water run off to the shower base, and is complemented with a gasket sealing system to ensure maximum water resistance. With an unobtrusive low profile and only 4mm spacing at the sill, the Shower Screen offers reduced external splashing to help you keep the bathroom cleaner, drier and safer. With a full length continuous double-handed door handle, this Shower Screen is designed with the whole family in mind. Easy to reach for everyone, it is user friendly, safe and functional. The Walshs Fully-Framed Fixed Panel Shower Screen is not just an 'off the shelf' product. It can also be designed for easy installation in most bathroom environments.

INTEGRITY™ 9410

INTEGRITY™ 9420

As with all the Walshs Shower Screen range, our Fully-framed fixed panel Shower Screen utilises a stainless steel pivot pin with a 'positive close' low friction design. The lowering effect of the design automatically reduces the gap between the sill and the door on closure. This helps eliminate water escaping the shower area and improves water resistance.

Colour range

Walshs Fully-framed Shower Screens come in a range of standard colours to suit any bathroom decor.

Sliding shower screens

Pivotech's Sliding Door Shower Screens are an ideal solution for smaller bathroom spaces. Where swinging doors are not practical, sliding doors reduce the overall space needed for a shower recess allowing for a more compact bathroom design. Cleaning is easy with the use of minimal metal. Complement your bathroom décor with a range of powder-coated and anodised finishes.

Two door shower screens

Less framing with a larger glass panel area makes the two door configuration ideal for minimising visual clutter in a small space. Having one or both panels slide offers a perfect solution for twin shower head recesses.

Three door shower screens

When a wider opening is required, the Pivotech three door shower screen is an ideal solution. The fixed panel is raised from the sill and located inside for safety and easy cleaning. The wheels are located at the top of the screen, keeping them away from soap and grime and enable easy adjustment if required.

Corner opening shower screens

To maximise a tight bathroom layout the corner opening is the widest opening which enables access from the middle of the bathroom. Its practical design allows the toilet and basin to be positioned on either side of the shower recess. Doors close from both directions with the profiles overlapping to minimise water leakage.
